SET UP GRANTED · OPTION 1 OF 2

Power Apps

Runs inside your Microsoft 365. Five steps to a working app.

Start here the same steps on GitHub

HAVE READY

- An IT admin who is a **SharePoint admin** and a **Power Platform admin**
- A licensed **Granted account** with a mailbox, e.g. `granted@yourcompany.com`
- A PC with **PowerShell 7** (aka.ms/powershell)

1 Run the set-up script — IT admin

```
> git clone https://github.com/AjaxAgents/GrantedPA
> cd GrantedPA
> pwsh ./setup/Setup-GrantedPA.ps1
```

Answer its questions. It makes **GrantedPA-ready.zip**.

2 Make the environment — IT admin

admin.powerplatform.microsoft.com → Environments → **+ New**: name **Granted**, type **Production**, Dataverse **Yes** → Save

Open it → Users → **+ Add user**: the Granted account as **System Administrator**

3 Import the app — as the Granted account

make.powerapps.com → environment **Granted** → Solutions → **Import solution** → GrantedPA-ready.zip

Each connection: **+ New connection** and sign in → **Import**

4 Share it

Apps → **Granted** → Share → **Granted Users** → Share

5 Open Granted

Set up your profile. Type the **admin set-up code** as a project code. Create the project. Invite your team from **Team & Invites**.

A working app

Bookings, approvals, QR gate passes and gate checks, on phones and browsers.

Ajax

SET UP GRANTED · OPTION 2 OF 2

Azure

Its own small website on your Azure. Four steps to a working app.

Try it first the working demo, nothing to install

HAVE READY • Someone with **Owner** on an Azure subscription

1 Open Azure Cloud Shell

shell.azure.com → sign in → **Bash**

2 Paste this, press Enter

```
$ git clone https://github.com/AjaxAgents/Granted
$ bash Granted/setup/azure-setup.sh
```

3 Answer four questions

Name, region, pilot or production, and the admin set-up code. It builds everything and prints your Granted address.

4 Open the address

Create your account. Type the **admin set-up code** as a project code. Create the project. Share its code with your team.

A working app

Bookings, approvals, QR gate passes and gate checks, in any phone browser.

The admin set-up code is never in GitHub or the app. You choose it while setting up; only a one-way hash is kept. Give it to people by phone or in person.
